# The Pre-LSS PPMS process

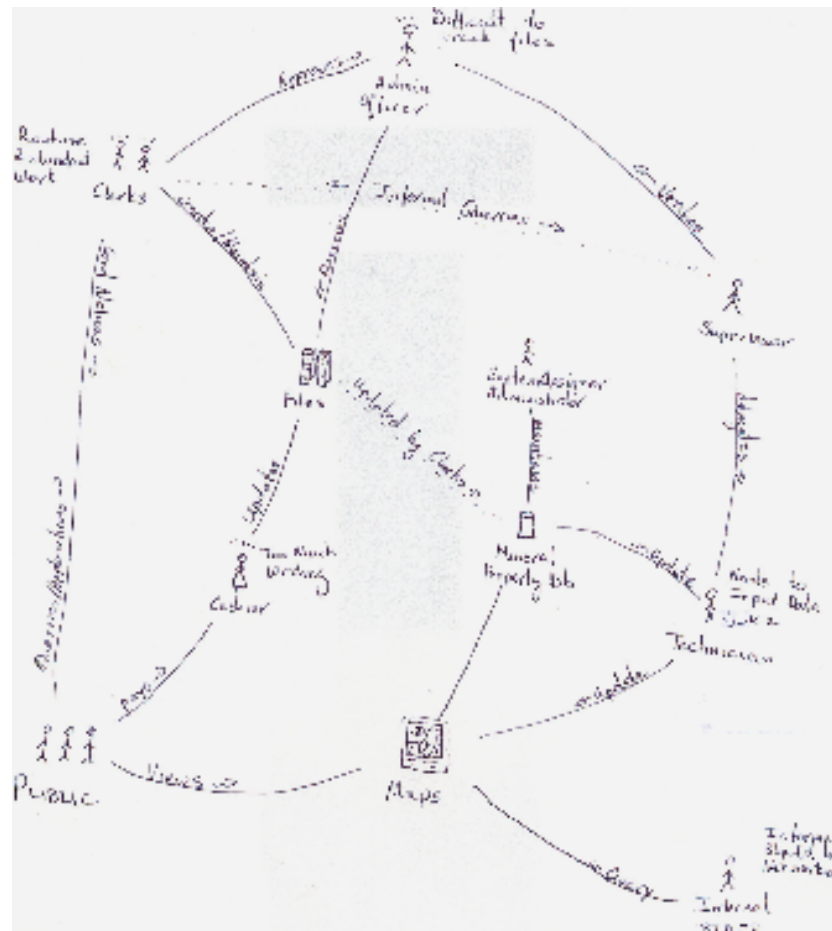

Diagram 1 Rich Picture Analysis of PPMS Process prior to standardisation

# Define Phase

- **GOAL of Define:** Define the scope of the project in terms of customer-critical demands, and identify the process or service in need of improvement.
- **Main Objective:**
  - Reduce the PPMS cycle time from over 300 days to 75 days
- Other objectives:
  - To improve tracking
  - To improve information flow
  - To reduce operational cost
  - To reduce cycle time

Tools used: Training, Process Diagram, Project Charter, Affinity Diagram.

# Project Charter

**PROJECT TITLE:** Reduced processing time for processing of PPMS applications

**Description:** reducing the processing time for PPMS from in excess of 180 days to 42 days.

**Background:** The current system takes on average 327 days .for an application to be processed. The current process is lengthy and tedious to customers and this is one area in which the commission can attain 80% customer satisfaction by June 2008

**Scope:** The intended changes will affect customers and staff

**KIPV:** Adequate staffing, computers, computer programs

**KOPV:** Customer satisfaction, reduced processing time (since time is a cost factor)

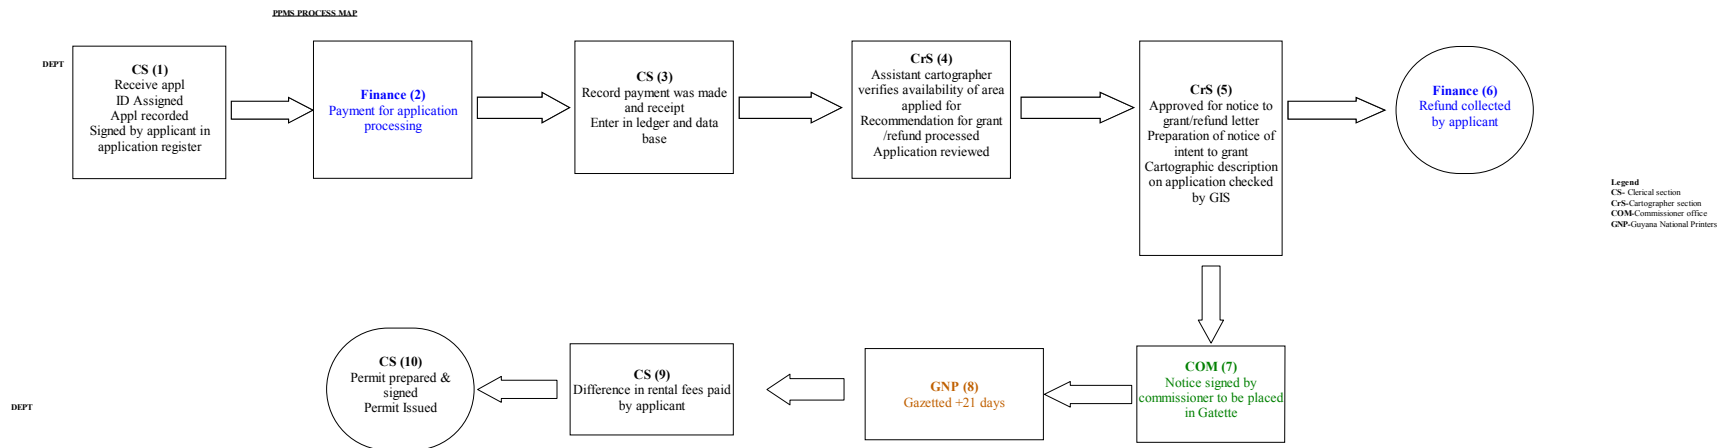

**Estimated Costs:** \$10, 034, 710.00

**Goals:** Improved processing time for applications for PPMS to 42 days, to be in sync with the customer satisfaction to above 80% by June 2008.

**Other Benefits:** satisfied workers with lighter work load more applications being processed in a shorter time

| Role             | Name                | Utilization | Start | End |
|------------------|---------------------|-------------|-------|-----|
| Project Champion | Mr .Woolford        |             |       |     |
| Team Member      | D. Singh            |             |       |     |

# Measure Phase

- **Goal:** Translate the problem into a measurable form, gather data and assess the current status.
- **Actions:**
  - A 30 days time frame was set for completing the CVSM data collection.
  - The team came up with strategies to collect information on cycle time.
  - Tool used: CVSM

# Analyze Phase

- **Goal:**
  - To identify and investigate influencing factors and root causes that determine the CTQs behavior
- **Actions**
  - The team brainstormed possible solutions for reducing the cycle time for the PPMS process.
  - Pooling and cross training was used to address the delays in the PPMS process
  - A short term solution to the problem is mandating to uplift files approximately every two hours and to get additional staff to enter payments and return files. While a long term solution is having computerized assistance.
- **Tools used: I.D., A.D., CVSM, Tree Diagram, Process map**

# A.D. Contributors – Inputs to I.D.

- Lack of Automation of Procedures
- Time taken to update files at cashier
- Inadequate amount of Staff
- Bottleneck @ steps 6, 14, 15, 28 – 31 of process map
- Unnecessary Redundancy 12 – 13 of process map
- Errors @ steps 7 – 17 of process map
- Unnecessary institutional impedance steps 19-20 of process map
- External Factors
- Equipment Failures
- Multiple Checks

# Interrrelationship Digraph

**Legend**

| KEY | Description                                     | Causes (in) | Effects (out) |
|-----|---|-------------|---------------|
| 1   | Lack of Automation of Procedures                | 1           | 6             |
| 2   | Time taken to update files at cashier           | 4           | 1             |
| 3   | Inadequate Staff                                | 1           | 3             |
| 4   | Bottleneck @ steps 6, 14, 15, 28 – 31           | 8           | 1             |
| 5   | Unnecessary Redundancy 12 – 13                  | 1           | 1             |
| 6   | Errors @ steps 7 – 17                           | 3           | 2             |
| 7   | Unnecessary institutional impedance steps 19-20 | 1           | 0             |
| 8   | External Factors                                | 0           | 2             |
| 9   | Equipment Failures                              | 1           | 4             |
| 10  | Multiple Checks                                 | 1           | 1             |

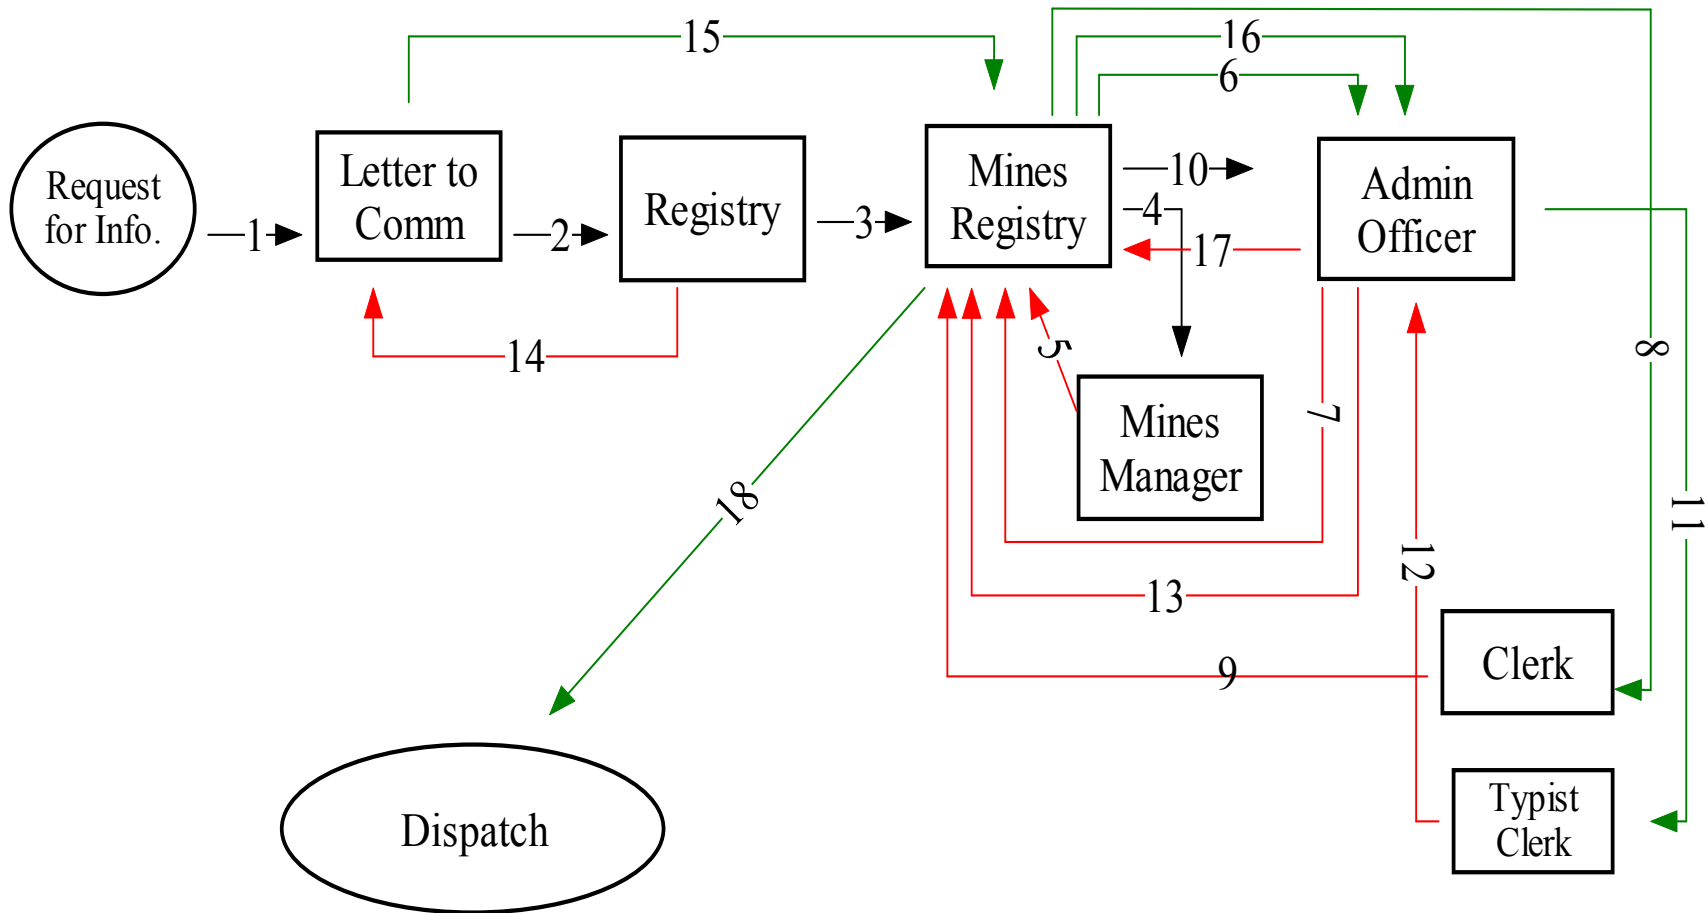

# Results of I.D.

- Key causes -- the bottlenecks @ steps 6, 14, 15, 28 – 31 of process map and time taken to update files at cashier
- Key effects -- lack of automation of procedures and an inadequate amount of staff

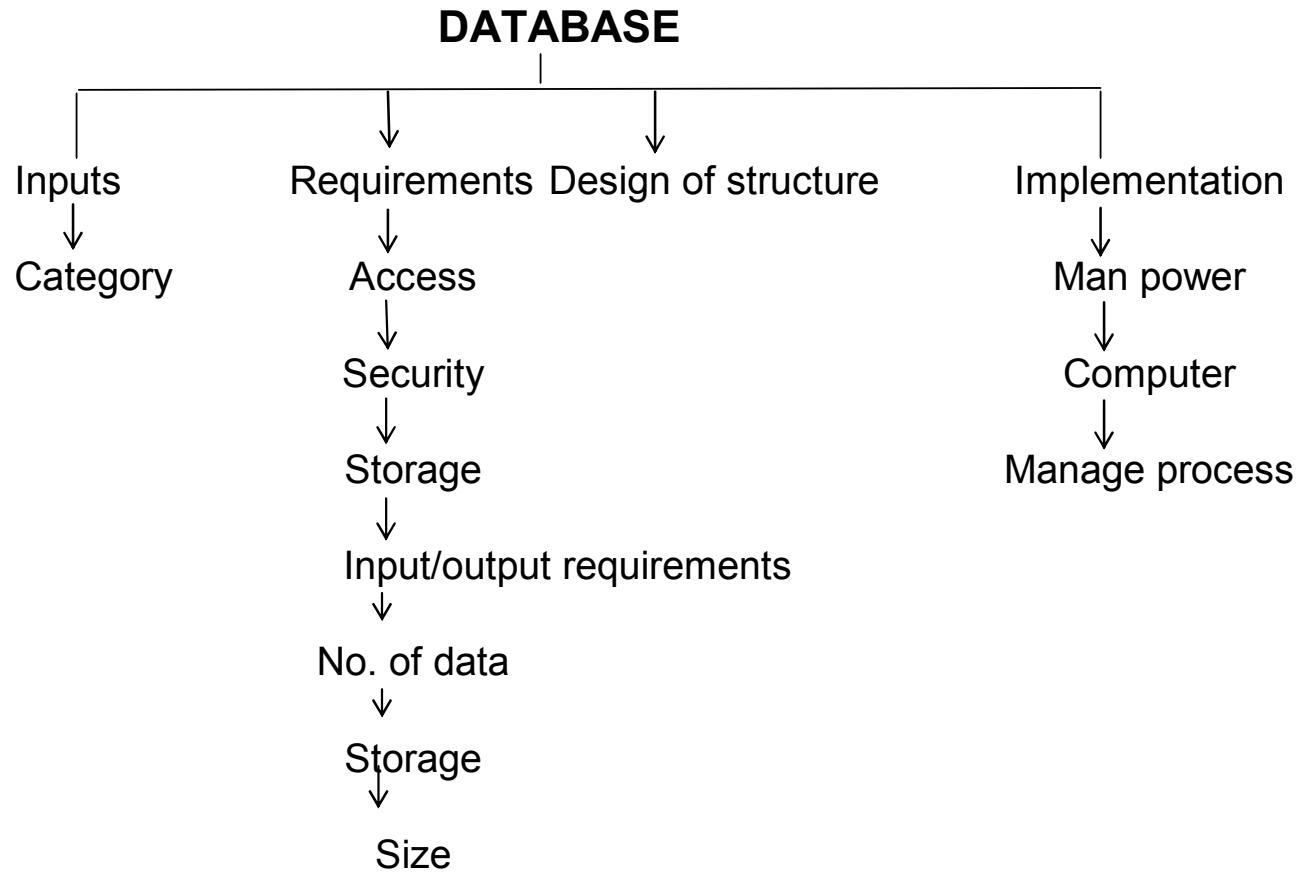

# Affinity Groups – Reducing Cycle Time

|                        | Automation  | Smooth flow of cycle  | Set time line for each task | Lessen cycle time generally | Proper management    | Availability of staff     | Other  |

## Executive Summary

- **GOAL:** Define the scope of the project in terms of customer-critical demands, and identify the process or service in need of improvement.
- **Results:**
  - To date, PPMS cycle time reduced from over 300 days to less than 100 days
  - The overall objectives are being met:
    - Improved tracking
    - Improved information flow
    - Reduced operational cost
    - Significant reductions in cycle time
